

## TONOPAH M. CO. MAKING RECORD MILLING PLANT

Output From Three Shafts is Being Augmented and the Future is Bright

Tonopah Mining company has increased its production of late, and according to official report covering the seven-day period ending December 4, the output amounted to 1600 tons. Shipment of bullion was retarded during the first half of November owing to the bursting of a big cyanide tank, but the cleanup which followed the resumption of operations at the Desert mill gave a burst of bullion having a value of \$80,000.

During the seven-day period in question the total development consisted of 265 feet, divided as follows: Silver Top shaft 126 feet; Mizpah shaft, 104 feet; Sand Grass shaft, 35 feet. Tonnage resulted as follows: Silver Top, 400 tons; Mizpah, 300 tons; Sand Grass, 300 tons. The report just issued follows:

### Silver Top Shaft

Drift 390 was continued southerly 32.5 feet. Drift 381 was continued easterly 18 feet with small quartz stringers showing. Raise 629 was advanced 32.5 feet with the face in good ore. Drift 644A was advanced 27 feet with no change to report. Winze 713 was sunk 16 feet on the Stone Cabin fault. Development for the week, 126 feet. Stopping from this section of the property produced 400 tons of mill ore.

### Mizpah Shaft

Drift 377 intermediate was continued westerly 25.5 feet. Raise 387 was started from the level below drift 383 intermediate. Advance, four feet. Drift 383 intermediate was started easterly from raise 383 and developed 12.5 feet on mill ore. Cross cut 3011 was started from drift 385 for prospect purposes. Raise 407 intermediate was advanced 20 feet, holding into old gob. Development 104 feet. Stopping from this section of the property produced 300 tons of mill ore.

### Sand Grass Shaft

Drift 1025 intermediate was advanced 10.5 feet. Stopping from this section of the property produced 300 tons of mill ore. Total development for the week, 265 feet. Total tonnage shipped to mill, 1600 tons. Thirty-six bars of bullion shipped valued at \$80,000.

## ARCTIC WASTES TO BE INVADED BY SEAPLANES

Detroit and New York Sports men Will Make Sensational Trip Next Summer

DETROIT, Mich., Dec. 12.—In a giant seaplane, a party of Detroit and New York sportsmen will invade the great wastes of the Arctic next summer on what is regarded as a most unusual hunting trip, if present plans are carried out. Members of the party intend to completely outfit the plane that it will match the modern parlor car for convenience and comfort.

The plane, which is being especially constructed at Keppert, N. J., will take an all water route to the far northern bay. It is planned to leave New York about July 1, thence to Montreal and Moose Factory. The Hudson bay territory will be entered from the latter station.

## ORLEANS HORNSILVER TO RESUME AT ONCE

Upon his arrival at Goldfield, A. L. D'Arcy, president and manager of the Orleans Hornsilver Mining company, made the announcement that operations would be resumed at once on his company's property at Hornsilver, 26 miles south of Goldfield. D'Arcy was one of a number of mining men called from southern Nevada camps as witnesses in the suit of C. A. Terwilliger of Goldfield against J. W. Dunfee, claiming under an old grab-stake agreement, one-half of the sum of \$90,000 conveyed by Dunfee in the sale of the Orleans mine to the Orleans Hornsilver Mining company.

The suit was brought to trial recently in the federal court at Carson City and subsequently, by agreement, between the litigants, the Orleans Hornsilver company originally made a defendant, was released as a party to the suit. D'Arcy remained in northern Nevada until the close of the trial as a witness for Dunfee. A week ago the case was concluded and Judge Farrington gave the plaintiff's counsel ten days in which to file a brief quoting authorities to sustain his contention.

## NOT DUE TO CIVILIZATION

Investigator Denies That Baldness Comes as a Result of Habits of Modern Man.

Shedding the hair of the head is part of the present evolution of civilized humanity, claims Dr. Alex. Heflick, of the Smithsonian institution, who has made an extensive anthropological study of Americans whose ancestors have lived at least three generations on this continent. It would be wrong to blame the reduced vitality shown by the hair on any particular habits of civilized man or on disease conditions.

These may play a part, he says, but the real cause is hereditary. The hair tends toward an earlier quality and loss because it has become of less use to man living under modern conditions than it was in the past. Nature does not tolerate for long what has become useless or weakened.

It is the men who are getting bald, he adds. Women lose hair, too, he says, but not nearly so rapidly as the males. He is sure the women do not mislead him, as all of them were examined with their hair undone and freely hanging down. Although Doctor Heflick explains the predisposition to baldness among males to inheritance, he adds words of warning to the dapper by explaining that the reason women have longer-lasting hair is that "possibly the weight of the female hair acts as a tonic."—Science Service.
